STARTUP PROFILE

CargoMind AI

AI logistics intelligence for domestic road freight

Address: Sardar Patel Institute of Technology, Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai – 400058, Maharashtra, India

Abstract:

CargoMind AI is an AI logistics-intelligence platform for domestic road freight in India. It reads handwritten, multilingual waybills (bilties) from a phone photo, suggests a data-backed price band and an arrival window with delay risk, flags suspicious consignments by cross-checking its own models, and lets drivers and customers use all of this by voice in their own language, on an ordinary phone and without special hardware.

Startup:

CargoMind AI was formed in the year 2026 by promoters Gyana Karn and Jitendra Karn, students of the MCA programme at Sardar Patel Institute of Technology, Mumbai. A patent application covering the core system is being prepared.

About Us:

FOUNDER

GK

GYANA KARN

S.P.I.T. MCA, Founder & Director (Product & Technology)

Leads the AI models and software. Built Billkaat, an OCR-assisted cargo billing and shipment tracking prototype, and authored the patent drafts.

CO-FOUNDER

JK

JITENDRA KARN

S.P.I.T. MCA, Co-founder & Director (Operations & Business)

Leads pilots, transporter relationships and operations, with domain access through a family cargo business.

Executive Summary:

Our product aims to give every road-freight operator the intelligence that large logistics firms have. A booking clerk photographs a bilty; our vision-language model fills in the fields with a confidence score for each and asks a human only about the uncertain ones. The platform then quotes a P10/P50/P90 price band and an arrival window with delay risk, and compares document weight, declared weight and price to catch fraud at the booking counter instead of at delivery. Every correction and decision becomes training data, so the system improves with use. Drivers and customers can do all of this by voice in Hindi, Marathi, Gujarati, Tamil and other languages.

Company Description:

Company Vision

To become the AI layer of Indian road freight, so that every transporter and driver, however small, can plan, price and protect every consignment with the intelligence that only large logistics companies have today.

Company Mission

CargoMind AI was founded to replace manual bilty entry, guesswork pricing and late fraud discovery with learned models that improve as more shipments pass through them, and to make these tools available to all users in their own language, by voice.

Company Values

- **Customer first:** every feature is designed around the booking clerk, fleet owner and driver.
- **Honest numbers:** we show ranges and confidence, and our voice agent only speaks values the system produced.
- **Respect for data:** customer data is never sold or misused, and is handled in line with the DPDP Act, 2023.
- **Inclusion:** voice and regional languages so low-literacy users are not left out.

The Problem:

Domestic road freight in India runs on a paper trail: handwritten consignment notes in several scripts, photographed on phones and re-typed by clerks. Prices are negotiated by phone, delivery times are promised from experience, and weight or billing fraud is usually found only at the destination. India has about 3.5 million truck operators owning about 12.5 million trucks, and roughly 75% of trucks belong to operators with fewer than five. Existing digital tools are app-first, English-first, and treat reading, pricing, tracking and fraud as separate problems.

Our Solution:

Multimodal waybill understanding
A vision-language model converts a phone photo of a bilty into structured fields (consignor, consignee, GSTIN, origin, destination, packages, weight, freight amount) with a confidence score for each.

Confidence-gated review
Only low-confidence or invalid fields are shown to the operator, with the image region highlighted. Corrections are stored and used to retrain the model.

Adaptive freight pricing
A quantile model returns P10, P50 and P90 prices using lane history, diesel price, season, tolls and backhaul probability, bounded by a cost floor and contractual caps.

Predictive ETA and delay risk
A graph model over road segments, using live traffic, weather and driver pace, returns an arrival window and the probability of missing the promised time.

Cross-model fraud detection
Residuals between document weight and declared weight, and between quoted and predicted price, feed an anomaly model that holds or flags suspicious consignments with reasons.

Grounded voice agent
Drivers and customers call or send a voice note; speech recognition and a language model call our own models as tools, and every number spoken is verified against system output.

Technology and Intellectual Property:

All models share one consignment embedding, so the pricing, ETA and fraud models reason about the same representation and audit one another: a quote far below the predicted price, or a waybill weight that disagrees with the declared weight, becomes evidence of fraud. This cross-model design, together with a closed correction loop and a grounded voice agent, is the subject of a patent application (Forms 1, 2, 3, 5 and 9) being prepared. A proprietary dataset of corrected multi-script bilties and lane price outcomes will build up with use and is expected to be a lasting advantage.

Target Customers:

Small and medium fleet owners (1–50 trucks), transport booking agents and brokers, and MSME shippers, with drivers as end users of the voice agent. Users are mostly 25–60 years old, from graduates to low-literacy drivers, and many prefer Hindi or Marathi. The first market is the Mumbai–Bhiwandi–Pune–Nashik corridor in Maharashtra, followed by Nagpur, Gujarat, Delhi-NCR and Tamil Nadu.

Business Model:

We sell monthly software subscriptions and own no trucks, so we carry no freight risk. Prices exclude 18% GST and are to be validated in pilots.

Plan	Price per month	Includes	For
Lite	Free	Waybill scanning, up to 30 a month	Single agents
Starter	Rs 999	Scanning, price band and ETA	One office
Pro	Rs 2,999 per branch	500 waybills, 300 voice minutes, fraud detection, multi-branch	Growing fleets
Enterprise / API	Rs 15,000	API access, high volume, support	3PLs, shippers, TMS vendors

Market Opportunity:

12.5 M	3.5 M	USD 153.9 B	8–9%
trucks in India	truck operators	road freight market, 2025	yearly growth, 2024–28

Drivers include a shortage of about 2.2 million drivers, digital compliance (GST, e-way bill, FASTag), cheap smartphones and maturing Indian-language speech models. Our software opportunity is estimated at about Rs 4,200 crore a year (3.5 million operators at Rs 12,000 a year, our own estimate). Sources: Redseer, Mordor Intelligence, Zinka Logistics investor material.

Competition:

Competitor	Focus	CargoMind AI difference
BlackBuck (Zinka)	Tolling, fuel, telematics, loads, finance	AI bilty reading, price bands, fraud checks and voice in one workflow
Porter	Intra-city goods transport	Long-haul focus; software, not a marketplace

Competitor	Focus	CargoMind AI difference
Mahindra Logistics (ex-Rivigo B2B)	B2B express logistics	Asset-light; no trucks or freight risk
Bilty / billing software; OCR with WhatsApp	Billing and manual substitutes	Learns from corrections and adds pricing, ETA and fraud detection

Traction and Status:

- Earlier prototype: Billkaat, an OCR-assisted cargo billing and shipment tracking system with booking, tax calculation and tracking.
- Patent survey of four related US patents completed; patent application documents drafted.
- Business plan, market analysis and four-year financial projection prepared.
- First pilot site available through a family cargo business. No paying customers yet.

Roadmap (first 12 months):

Months 1–3	Months 4–6	Months 7–9	Months 10–12
Free pilot with 10–20 transporters; waybill digitisation and weight/price check; incorporation and patent filing	Paid launch of Starter and Pro on the Mumbai–Bhiwandi–Pune corridor; field sales team	Price bands, ETA and delay-risk alerts; expand to Nashik and Nagpur	Voice agent in Hindi and Marathi; fraud detection in Pro; about 166 paying accounts

Financial Snapshot (planning estimates, Rs lakh):

	2026	2027	2028	2029
Revenue	13.6	149.0	529.0	1,102.4
Total expenses	79.6	206.3	401.9	603.1
Operating profit / (loss)	(66.0)	(57.3)	127.1	499.3
Active paying accounts (Dec)	166	885	2,396	3,988
Funding received	85.0	200.0	200.0	0

Gross margin is about 80% in every year. Operating profit begins in 2028. Total planned funding is Rs 4.85 crore through grants, angel, seed and pre-Series A rounds. These figures are projections for a company that has not yet launched and will be replaced by pilot data.

Key Risks and How We Manage Them:

- **Willingness to pay:** run a 3-month paid pilot with 10–20 transporters and measure time saved and errors prevented.
- **Accuracy on handwritten bilties:** confidence gating, human review of doubtful fields, and continual retraining on corrections.
- **False fraud alarms:** thresholds recalibrated to a target false-positive rate from reviewer decisions.
- **Large platforms copying us:** build the data advantage, and offer our models through APIs.
